Activating a Licence Key

Activating a Licence Using the Web Interface

Before you start

You must have received the licence key for your specific unit .

Steps

- 1) Go to **System/Information**.
- 2) In the **Activate Licence** table, enter your licence key.

Note: A licence key is generated for one specific unit only, therefore it cannot be used on another unit.

- 3) Click **Apply**.
- 4) Validate that the Licences table now displays the Licences.
- 5) At the top of the screen, **restart required services**.

Result

Licences	
CWMP/TR-069	
SBC Licence for 10 concurrent sessions	
Virtual Machine Licence	
Survivability Licence with 25 users	

Activate Licence	
Licence Key:	\$Example

Activating a Licence Using the CLI

Before you start

You must have received the licence key for your specific unit.

Information

For more details on using the CLI with an SSH client, refer to the [Technical Bulletin - Using the CLI via an SSH Session](#), published on the [Media5 Documentation Portal](#).

Steps

- 1) Log into the CLI using an SSH client.
- 2) Enter the licence key received for your unit in the **Dcm.ActivateLicence LicenceKey="key"** command.

Note: A licence key is generated for one specific unit only, therefore it cannot be used on another unit.

- 3) Restart the unit by typing the **Pcm.Restart** command line.
- 4) Enter **Dcm.ActiveFeature**, to validate if the licence has been successfully installed.

Result

The feature the licence is activating will be listed.

```
Global>Dcm.ActiveFeature
```

ID	Description	Delete
0	Telnet Licence	noOp
1	CWMP/TR-069	noOp
2	SBC Licence for 10 concurrent sessions	noOp
3	Virtual Machine Licence	noOp
4	Survivability Licence with 10 users	noOp

Online Help

If you are not familiar with the meaning of the fields and buttons, click **Show Help**, located at the upper right corner of the Web page. When activated, the fields and buttons that offer online help will change to green and if you hover over them, the description will be displayed.

DGW Documentation

Mediatrix devices are supplied with an exhaustive set of documentation.

Mediatrix user documentation is available on the [Media5 Documentation Portal](#).

Several types of documents were created to clearly present the information you are looking for. Our documentation includes:

- **Release notes:** Generated at each GA release, this document includes the known and solved issues of the software. It also outlines the changes and the new features the release includes.
- **Configuration notes:** These documents are created to facilitate the configuration of a specific use case. They address a configuration aspect we consider that most users will need to perform. However, in some cases, a configuration note is created after receiving a question from a customer. They provide standard step-by-step procedures detailing the values of the parameters to use. They provide a means of validation and present some conceptual information. The configuration notes are specifically created to guide the user through an aspect of the configuration.
- **Technical bulletins:** These documents are created to facilitate the configuration of a specific technical action, such as performing a firmware upgrade.
- **Hardware installation guide:** They provide the detailed procedure on how to safely and adequately install the unit. It provides information on card installation, cable connections, and how to access for the first time the Management interface.
- **User guide:** The user guide explains how to customise to your needs the configuration of the unit. Although this document is task oriented, it provides conceptual information to help the user understand the purpose and impact of each task. The User Guide will provide information such as where and how TR-069 can be configured in the Management Interface, how to set firewalls, or how to use the CLI to configure parameters that are not available in the Management Interface.
- **Reference guide:** This exhaustive document has been created for advanced users. It includes a description of all the parameters used by all the services of the Mediatrix units. You will find, for example, scripts to configure a specific parameter, notification messages sent by a service, or an action description used to create Rulesets. This document includes reference information such as a dictionary, and it does not include any step-by-step procedures.
