

The background of the page is a dark blue gradient with a complex, abstract pattern of white lines and dots. The pattern resembles a network or a stylized map, with lines connecting various points. The dots are arranged in a way that suggests a globe or a large-scale data visualization.

Exporting a Configuration Script to a PC

Configuration Scripts Import and Export

Importing and exporting configuration scripts allows you to modify in whole or in part the configuration script used on your unit.

Configuration scripts are files containing textual commands that are sent over the network to a Mediatrix unit. Upon receiving the file, the unit executes each command line in sequence. Script commands can assign values to configuration variables, or execute configuration commands.

A configuration script can be used on any firmware version, regardless of the firmware version it was exported from. It is possible to import a complete configuration script, a subset of the configuration script or even a few lines of a configuration script.

Importing a configuration script can be useful to:

- Change one or several script commands
- Add new commands
- Change parameter values
- Add parameters
- Replace the complete configuration script

Scripts are written by the system administrator and can be used to accomplish various tasks, such as automating recurrent configuration tasks or batch-applying configuration settings to multiple devices. Scripts can be executed once or periodically at a specified interval. They can also be scheduled to be executed when the Mediatrix unit starts.

Exporting a Configuration Script to Your PC

Steps

- 1) Go to **Management/Configuration Scripts/Export**.
- 2) If you are not using HTTPS, click **Activate unsecure file importation from the Web browser** located at the top of the page.
- 3) In the **Download Script From Web Browser** table, from the **Content** selection list, choose if you wish to export only what is different from the factory configuration script or the complete configuration.
- 4) If you wish to use encryption for transfer operations, complete the **Privacy Key** field.

Note: Media5 strongly recommends to use encryption to protect certificates and passwords.

- 5) Click **Export and Download**.

Result

The configuration script will be exported to your PC in the Downloads folder. The system generates a macAddress.cfg file name.
